

CASE CAPITAL TERMINAL

OPERATING SCHEDULE | ALL TIMES EASTERN TIME (ET)

Generated from scheduler definitions at commit 8ee0b39. Market-session jobs use the exchange calendar; weekends and exchange holidays show STANDBY rather than stale or failed.

MARKET-SESSION SCANS

Time	Job	Scope	Closed-market behavior
00:00	Coordinated stock scan	Core + PM-routable strategy fan-out	STANDBY
08:00	Coordinated stock scan	Core + PM-routable strategy fan-out	STANDBY

WEEKLY LEARNING AND GOVERNANCE

Time	Job
Sunday 02:00	Learning cycle
Sunday 02:20	Lottery learning cycle
Sunday 03:00	Trade-floor recalibration
Sunday 19:50	Truth review

CONTROL RULES

- Health age is calculated from provider evidence timestamps, not merely from the time QC cached its result.
- Alpaca is the execution and account-data authority. A failed or stale Alpaca probe blocks order scopes and never silently falls back to an unverified source.
- The HTTP VPS does not register an inbound Telegram webhook. Outbound consolidated reports remain available when Telegram credentials are configured.
- No scheduled job submits an order while the market is closed.
